## PROFESSIONAL EXPERIENCE

Mr. Moore's experience in the private environmental consulting industry has included providing professional services to both residential property owners and larger corporations/entities throughout New England and the mid-Atlantic region focusing on waste site assessment and remediation under state-administered remediation programs. His work has also included complex real-estate driven transaction assessments, and he has thorough experience with the relevant guidance, including the ASTM-series Practices and state-administered programs.

Mr. Moore has worked as an individual case manager and program manager for major oil companies, trucking and integrated logistics companies, regional petroleum marketers, municipal entities, property management and development firms, law firms, and other clients, including citizen participation or interest groups. He has been responsible for directing emergency response, short-term response, and comprehensive response actions at petroleum refineries, individual petroleum retailing sites, inter-modal trucking and transport locations, as well as former reclamation and recycling properties across New England, and in New York and New Jersey.

He has provided litigation support services for property-specific and class-specific cases in state, federal, and multidistrict litigation suits in the Northeast, Mid-Atlantic, and Southern regions of the United States, including work on petroleum refineries, chlor-alkali and chemical manufacturing plants, metal and concrete recycling facilities, and industrial/commercial properties. Mr. Moore also serves as a primary contributor and manager of the upstream oil and gas consulting activities, including Environmental Baseline Surveys, Site Assessments, and Impact Assessments for existing exploration and production units, and proposed seismic, drilling, and production facilities.
